Category 1 Message Types

The following table lists all message types defined in category 1.

For each message type, there is a short description, an indicator whether the message type is signed (Y/N), the maximum message length on input (2,000 or 10,000 characters), whether the use of the message requires registration with SWIFT for use in a message user group (Y) or not (N) and whether value date ordering (VDO) can be requested for the message (Y/N). Value date ordering criteria are described in the *Standards MT General Information*.

(1) A Relationship Management Application (RMA) authorisation is required in order to sign a message.

Note: A Message User Group (MUG), for the purposes of this book, is a group of users who have voluntarily agreed to support the specified message type and have registered with SWIFT to send or receive the specified message type. These messages are indicated in the preceding table in the column MUG.

Registration is free of charge. To register to use one or more message types, submit a registration request (**Order Message User Group**) through the forms available on www.swift.com > Ordering & Support > Ordering > Order Products and Services > Message User Group (MUG).

To withdraw from a MUG, use the **Terminate your MUG subscription** request. These forms are available at www.swift.com > Ordering & Support > Ordering > Terminate and deactivate > Message User Group (MUG).

To get the list of other members of a particular MUG, send an MT 999 to the Customer Implementation team (SWHQBEBBCOS).

MT 103 Single Customer Credit Transfer

The MT 103 is a General Use message, that is, no registration in a Message User Group (MUG) is necessary to send and receive this message. It allows the exchange of single customer credit transfers using all MT 103 fields. The MT 103 can be straight through processable if the message is properly formatted according to pre-agreed bilateral/multilateral rules.

Two variants of the MT 103 exist and these are documented separately:

1. The MT 103 STP is a general use message, that is, no registration in a MUG is necessary to send and receive this message. It allows for the exchange of single customer credit transfers using a network-validated, restricted set of fields and format options of the MT 103 to make it straight through processable.
2. The MT 103 REMIT requires registration in the Extended Remittance Information MUG. This MUG allows its subscribers to exchange MT 103 REMIT messages with an extended amount of remittance information in the additional field 77T Envelope Contents. This remittance information may optionally be exchanged in a non-SWIFT format, such as EDIFACT or ANSI-X12.

IMPORTANT: User header block (block 3) must be present and must contain field 121 Unique End-to-end Transaction Reference (UETR). In cases where the sender is acting as intermediary and a UETR was present in the received message, the UETR must be passed, unchanged, to the next message in the transaction chain. In all other cases a new UETR must be used. Details of the format of the user header block and field 121, and also the required order of fields in the user header block, can be found in the FIN Operations Guide.

MT 103 Scope

This message type is sent by or on behalf of the financial institution of the ordering customer, directly or through (a) correspondent(s), to the financial institution of the beneficiary customer.

It is used to convey a funds transfer instruction in which the ordering customer or the beneficiary customer, or both, are non-financial institutions from the perspective of the Sender.

This message may only be used for clean payment instructions. It must not be used to advise the remitting bank of a payment for a clean, for example, cheque, collection, nor to provide the cover for a transaction whose completion was advised separately, for example, via an MT 400.

MT 103 Usage Rules

- When the cover method is used for a customer credit transfer, the originating bank must:
 - copy the content of field 20 of the MT 103 unchanged into field 21 of the related MT 202 COV;
 - copy the content of field 121, in the user header block, of the MT 103 unchanged into field 121, in the user header block, of the related MT 202 COV.

- Field 72 may only be present when it is structured, that is, only contains coded information.
- When sending the message via FileAct, institutions should bilaterally agree on the maximum size of the message.

Usage Rules for Amount Related Fields

There is a relationship between the amount related fields 33B, 36, 71G, 71F and 32A which may be logically expressed in the following formula:

- The instructed amount in field 33B, adjusted with the exchange rate in field 36, plus the Receiver's charges in field 71G, minus the Sender's charges in field(s) 71F, equals the interbank settled amount in field 32A.

Presence of the fields mentioned above is subject to the conditional field rules C1, C2, C15 and C16. If a field is not present, that field must not be taken into account in the formula. If field 71F is present more than once, all occurrences of that field must be taken into account in the formula.

Examples: Transaction A

- Pay the equivalent of EUR 1000,00 in GBP to a beneficiary in the United Kingdom
- Exchange rate is 1 EUR for 0,61999 GBP
- Transaction charges on the Sender's side are EUR 5,00 (=GBP 3,1)
- Transaction charges on the Receiver's side are GBP 4 (=EUR 6,45)

Example A1: Charging option is OUR

A. Amount debited from the ordering customer's account:

MT 103 Market Practice Rules

As indicated in the MT 103 Guidelines, when an MT 103 is sent using the cover method, an MT 202 COV message must be sent to cover the transfer. A credit to a beneficiary's account that is based on the receipt of an MT 103, without receipt of the related cover payment, is a policy decision. Institutions have deployed processes that are approved by their internal risk committees; the risk lies clearly with the beneficiary institution. Guidelines for the processing of an MT 103 sent with the cover method have been published by the Payments Market Practice Group (PMPG).

For more details, see the market practice document *Guidelines for use of the MT 202 COV* on www.pmpg.info.

MT 103 Guidelines

- If the Sender and the Receiver wish to use their direct account relationship in the currency of the transfer, then the MT 103 message will contain the cover for the customer transfer as well as the payment details.
- If the Sender and the Receiver have no direct account relationship in the currency of the transfer or do not wish to use their account relationship, then third banks will be involved to cover the transaction. The MT 103 contains only the payment details and the Sender must cover the customer transfer by sending an MT 202 COV General Financial Institution Transfer to a third bank. This payment method is called 'cover'.
- Where more than two financial institutions are involved in the payment chain, and if the MT 103 is sent from one financial institution to the next financial institution in this chain, then the payment method is called 'serial'.
- If the Receiver does not service an account for the beneficiary customer, and no account servicing institution is indicated, nor any alternative instructions given, then the Receiver will act upon the customer credit transfer instruction in an appropriate manner of its choice.

- In order to allow better reconciliation by the beneficiary customer, the MT 103 supports full charges transparency and structured remittance information.
- In order to allow better reconciliation by the Receiver, the MT 103 gives an unambiguous indication of the interbank amount booked by the Sender/to be booked by the Receiver.
- The MT 103 gives the Sender the ability to identify in the message the level of service requested, that is, what service is expected from the Receiver for a particular payment, for example, SWIFTPay, Standard or Priority or any other bilaterally agreed service.
- The message also allows for the inclusion of regulatory information in countries where regulatory reporting is requested.

Option D	[/1!a]/[34x] 4*35x	(Party Identifier) (Name and Address)

PRESENCE

Conditional (see rules C4, C5, and C7)

DEFINITION

Where required, this field specifies the account or branch of the Sender or another financial institution through which the Sender will reimburse the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

Absence of this field implies that there is a unique account relationship between the Sender and the Receiver or that the bilaterally agreed account is to be used for settlement.

Option A is the preferred option.

In those cases where there are multiple direct account relationships, in the currency of the transaction, between the Sender and the Receiver, and one of these accounts is to be used for reimbursement, the account to be credited or debited must be indicated in field 53a, using option B with the party identifier only.

If there is no direct account relationship, in the currency of the transaction, between the Sender and the Receiver (or branch of the Receiver when specified in field 54a), then field 53a must be present.

When field 53a is present and contains a branch of the Sender, the need for a cover message is dependent on the currency of the transaction, the relationship between the Sender and the Receiver and the contents of field 54a, if present.

A branch of the Receiver may appear in field 53a if the financial institution providing reimbursement is both the Sender's correspondent and a branch of the Receiver, and the Sender intends to send a cover message to the branch of the Receiver. In this case, the Receiver will be paid by its branch in

field 53a.

In all other cases, when field 53a is present, a cover message, that is, MT 202 COV or equivalent non-SWIFT must be sent to the financial institution identified in field 53a.

When field 53B is used to specify a branch city name, it must always be a branch of the Sender.

The use and interpretation of fields 53a and 54a is, in all cases, dictated by the currency of the transaction and the correspondent relationship between the Sender and Receiver relative to that currency.

Option B must only be used with a location.

In those cases where field 54a contains a branch of the Receiver, and is not preceded by field 53a, or field 53a contains an account of the Sender serviced by the Receiver's branch, the Receiver will claim reimbursement from its branch.

If field 54a contains a branch of the Receiver and field 53a contains a branch of the Sender, the Receiver will claim reimbursement from its branch or will be paid by its branch, depending on the currency of the transfer and the relationship between the Sender and the Receiver.

In all other cases where field 54a contains a branch of the Receiver, the Receiver will be paid by its branch in field 54a.

A branch of the Sender must not appear in field 54a.

If the branch of the Sender or other financial institution specified in field 53a is also the account servicer for the Receiver, field 54a must not be present.

Field 54a containing the name of a financial institution other than the Receiver's branch must be preceded by field 53a; the Receiver will be paid by the financial institution in field 54a.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

When field 57a is not present, it means that the Receiver is also the account with institution.

When one of the codes //FW (with or without the 9-digit number), //AU, //CP, //IN or //RT is used, it should appear only once and in the first of the fields 56a and 57a of the payment instruction.

When it is necessary that an incoming SWIFT payment be made to the party in this field via Fedwire, US banks require that the code //FW appears in the optional Party Identifier of field 56a or 57a.

When it is necessary that an incoming SWIFT payment be made to the intermediary or the account with institution via real-time gross settlement (RTGS), the code //RT should appear in the optional Party Identifier of field 56a or 57a.

The code //RT is binding for the Receiver. If it is used with option A, it must not be followed by any other information. If it is used with option C or D, it may be followed by another domestic clearing code.

Option A is the preferred option.

Option C must be used containing a 2!a clearing system code preceded by a double slash '//'.

Option D must only be used in exceptional circumstances: when the party cannot be identified by a financial institution BIC, when there is a need to be able to specify a name and address, for example, due to regulatory considerations or when there is a bilateral agreement between the Sender and the Receiver permitting its use.

When qualified by a clearing system code or an account number, the use of option D may enable the automated processing of the instruction(s) by the Receiver.

The net amount after deduction of the Sender's charges will be quoted as the inter-bank settled amount in field 32A.

This field may be repeated to specify to the Receiver the currency and amount of charges taken by preceding banks in the transaction chain. Charges should be indicated in the order in which they have been deducted from the transaction amount, that is, the first occurrence of this field specifies the charges of the first bank in the transaction chain that deducted charges; the last occurrence always gives the Sender's charges.

Each code used must be between slashes and appear at the beginning of a line. It may be followed by additional narrative text.

Narrative text relating to a preceding code, which is continued on the next line(s), must start with a double slash '//', and, if used, must begin on a new line. Narrative text should preferably be the last information in this field.

Use of field 72, particularly with uncoded instructions, may cause delay, because, in automated systems, the presence of this field will normally require manual intervention.

It is strongly recommended to use the standard codes proposed above. In any case, where bilateral agreements covering the use of codes in this field are in effect, the code must conform to the structured format of this field.

The code INS may be repeated to specify all previously involved financial institutions in the transaction chain .

Instructing institutions should be indicated in the order in which they were involved in the transaction chain, that is, the first occurrence specifies the financial institution that received the instruction from the ordering institution and passed it on to the next institution in the transaction chain; the last occurrence always indicates the institution that instructed the sender of this message to execute the transaction.

If codes INS or ACC are present in field 72 of a received message, then these codes and the related details must be passed, unchanged, in field 72 of the subsequent message in the payment chain. Additional codes and details may be added to field 72 of the subsequent message but the original INS and ACC and related details must not be altered or removed.

MT 103 REMIT Single Customer Credit Transfer

The MT 103 REMIT requires registration in the Extended Remittance Information message user group. This message user group allows its subscribers to exchange MT 103 REMIT messages with an extended amount of remittance information in field 77T. This remittance information may optionally be exchanged in a non-SWIFT format, such as EDIFACT or ANSI-X12.

The differences with the core MT 103 are:

- MT 103 REMIT requires registration in the Extended Remittance Information message user group.
- The user header (block 3 of the message) must contain the code REMIT in field 119 ({3:{119:REMIT}}).
- MT 103 REMIT has no field 70 Remittance Information.
- MT 103 REMIT has a field 77T Envelope Contents for extended remittance information.

IMPORTANT: User header block (block 3) must be present and must contain field 119 Validation Flag, with code REMIT, and field 121 Unique End-to-end Transaction Reference (UETR). In cases where the sender is acting as intermediary and a UETR was present in the received message, the UETR must be passed, unchanged, to the next message in the transaction chain. In all other cases, a new UETR must be used. Details of the format of the user header block and field 121, and also the required order of fields in the user header block, can be found in the FIN Operations Guide.

MT 103 REMIT Scope

This message type is sent by or on behalf of the financial institution of the ordering customer, directly or through (a) correspondent(s), to the financial institution of the beneficiary customer.

It is used to convey a funds transfer instruction in which the ordering customer or the beneficiary customer, or both, are non-financial institutions from the perspective of the Sender.

This message may only be used for clean payment instructions. It must not be used to advise the remitting bank of a payment for a clean, for example, cheque, collection, nor to provide the cover for a transaction whose completion was advised separately, for example, via an MT 400.

 - copy the content of field 20 of the MT 103 REMIT unchanged into field 21 of the related MT 202 COV;
 - copy the content of field 121, in the user header block, of the MT 103 REMIT unchanged into field 121, in the user header block, of the related MT 202 COV.

- Field 72 may only be present when it is structured, that is, only contains coded information.
- When sending the message via FileAct, institutions should bilaterally agree on the maximum size of the message.

Usage Rules for Amount Related Fields

There is a relationship between the amount related fields 33B, 36, 71G, 71F and 32A which may be logically expressed in the following formula:

- The instructed amount in field 33B, adjusted with the exchange rate in field 36, plus the Receiver's charges in field 71G, minus the Sender's charges in field(s) 71F, equals the interbank settled amount in field 32A.

Presence of the fields mentioned above is subject to the conditional field rules C1, C2, C14 and C15. If a field is not present, that field must not be taken into account in the formula. If field 71F is present more than once, all occurrences of that field must be taken into account in the formula.

Examples: Transaction A

- Pay the equivalent of EUR 1000,00 in GBP to a beneficiary in the United Kingdom
- Exchange rate is 1 EUR for 0,61999 GBP
- Transaction charges on the Sender's side are EUR 5,00 (=GBP 3,1)
- Transaction charges on the Receiver's side are GBP 4 (=EUR 6,45)

Example A1: Charging option is OUR

A. Amount debited from the ordering customer's account:

MT 103 REMIT Market Practice Rules

As indicated in the MT 103 REMIT Guidelines, when an MT 103 REMIT is sent using the cover method, an MT 202 COV message must be sent to cover the transfer. A credit to a beneficiary's account that is based on the receipt of an MT 103 REMIT, without receipt of the related cover payment, is a policy decision. Institutions have deployed processes that are approved by their internal risk committees; the risk lies clearly with the beneficiary institution. Guidelines for the processing of an MT 103 REMIT sent with the cover method have been published by the Payments Market Practice Group (PMPG).

For more details, see the market practice document *Guidelines for use of the MT 202 COV* on www.pmpg.info.

MT 103 REMIT Guidelines

- If the Sender and the Receiver wish to use their direct account relationship in the currency of the transfer, then the MT 103 REMIT message will contain the cover for the customer transfer as well as the payment details.
- If the Sender and the Receiver have no direct account relationship in the currency of the transfer or do not wish to use their account relationship, then third banks will be involved to cover the transaction. The MT 103 REMIT contains only the payment details and the Sender must cover the customer transfer by sending an MT 202 COV General Financial Institution Transfer to a third bank. This payment method is called 'cover'.
- Where more than two financial institutions are involved in the payment chain, and if the MT 103 REMIT is sent from one financial institution to the next financial institution in this chain, then the payment method is called 'serial'.
- If the Receiver does not service an account for the beneficiary customer, and no account servicing institution is indicated, nor any alternative instructions given, then the Receiver will act

upon the customer credit transfer instruction in an appropriate manner of its choice.

- In order to allow better reconciliation by the beneficiary customer, the MT 103 REMIT supports full charges transparency and structured remittance information.
- In order to allow better reconciliation by the Receiver, the MT 103 REMIT gives an unambiguous indication of the interbank amount booked by the Sender/to be booked by the Receiver.
- The MT 103 REMIT gives the Sender the ability to identify in the message the level of service requested, that is, what service is expected from the Receiver for a particular payment, for example, SWIFTPay, Standard or Priority or any other bilaterally agreed service.
- The message also allows for the inclusion of regulatory information in countries where regulatory reporting is requested.

Option D	[/1!a]/[34x] 4*35x	(Party Identifier) (Name and Address)

PRESENCE

Conditional (see rules C4, C5, and C7)

DEFINITION

Where required, this field specifies the account or branch of the Sender or another financial institution through which the Sender will reimburse the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

Absence of this field implies that there is a unique account relationship between the Sender and the Receiver or that the bilaterally agreed account is to be used for settlement.

Option A is the preferred option.

In those cases where there are multiple direct account relationships, in the currency of the transaction, between the Sender and the Receiver, and one of these accounts is to be used for reimbursement, the account to be credited or debited must be indicated in field 53a, using option B with the party identifier only.

If there is no direct account relationship, in the currency of the transaction, between the Sender and the Receiver (or branch of the Receiver when specified in field 54a), then field 53a must be present.

When field 53a is present and contains a branch of the Sender, the need for a cover message is dependent on the currency of the transaction, the relationship between the Sender and the Receiver and the contents of field 54a, if present.

A branch of the Receiver may appear in field 53a if the financial institution providing reimbursement is both the Sender's correspondent and a branch of the Receiver, and the Sender intends to send a cover message to the branch of the Receiver. In this case, the Receiver will be paid by its branch in

field 53a.

In all other cases, when field 53a is present, a cover message, that is, MT 202 COV or equivalent non-SWIFT must be sent to the financial institution identified in field 53a.

When field 53B is used to specify a branch city name, it must always be a branch of the Sender.

The use and interpretation of fields 53a and 54a is, in all cases, dictated by the currency of the transaction and the correspondent relationship between the Sender and Receiver relative to that currency.

13. Field 54a: Receiver's Correspondent

FORMAT

Option A	[/1!a]/[34x] 4!a2!a2!c[3!c]	(Party Identifier) (Identifier Code)

DEFINITION

This field specifies the branch of the Receiver or another financial institution at which the funds will be made available to the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

Option A is the preferred option.

Option B must only be used with a location.

In those cases where field 54a contains a branch of the Receiver, and is not preceded by field 53a, or field 53a contains an account of the Sender serviced by the Receiver's branch, the Receiver will claim reimbursement from its branch.

If field 54a contains a branch of the Receiver and field 53a contains a branch of the Sender, the Receiver will claim reimbursement from its branch or will be paid by its branch, depending on the currency of the transfer and the relationship between the Sender and the Receiver.

In all other cases where field 54a contains a branch of the Receiver, the Receiver will be paid by its branch in field 54a.

A branch of the Sender must not appear in field 54a.

If the branch of the Sender or other financial institution specified in field 53a is also the account servicer for the Receiver, field 54a must not be present.

Field 54a containing the name of a financial institution other than the Receiver's branch must be preceded by field 53a; the Receiver will be paid by the financial institution in field 54a.

The net amount after deduction of the Sender's charges will be quoted as the inter-bank settled amount in field 32A.

This field may be repeated to specify to the Receiver the currency and amount of charges taken by preceding banks in the transaction chain. Charges should be indicated in the order in which they have been deducted from the transaction amount, that is, the first occurrence of this field specifies the charges of the first bank in the transaction chain that deducted charges; the last occurrence always gives the Sender's charges.

PRESENCE

Optional

DEFINITION

This field specifies additional information for the Receiver or other party specified.

CODES

Unless bilaterally agreed otherwise between the Sender and the Receiver, one of the following codes must be used in Code, placed between slashes ('/'):

INT	Intermediary institution	Instructions following are for the intermediary institution.

REC	Receiver	Instructions following are for the Receiver of the message.
-----	----------	---

NETWORK VALIDATED RULES

If the first six characters in line 1 contain the character string /REJT/ or /RETN/, then it is mandatory to follow the *Payments Reject/Return Guidelines* described in the *Standards MT Usage Guidelines*(Error code(s): T80).

USAGE RULES

Field 72 must never be used for information for which another field is intended.

Each item for which a code exists must start with that code and may be completed with additional information.

Each code used must be between slashes and appear at the beginning of a line. It may be followed by additional narrative text.

Narrative text relating to a preceding code, which is continued on the next line(s), must start with a double slash '//', and, if used, must begin on a new line. Narrative text should preferably be the last information in this field.

Use of field 72, particularly with uncoded instructions, may cause delay, because, in automated systems, the presence of this field will normally require manual intervention.

It is strongly recommended to use the standard codes proposed above. In any case, where bilateral agreements covering the use of codes in this field are in effect, the code must conform to the structured format of this field.

The code INS may be repeated to specify all previously involved financial institutions in the transaction chain.

Instructing institutions should be indicated in the order in which they were involved in the transaction chain, that is, the first occurrence specifies the financial institution that received the instruction from the ordering institution and passed it on to the next institution in the transaction chain; the last occurrence always indicates the institution that instructed the sender of this message to execute the transaction.

If codes INS or ACC are present in field 72 of a received message, then these codes and the related details must be passed, unchanged, in field 72 of the subsequent message in the payment chain. Additional codes and details may be added to field 72 of the subsequent message but the original INS and ACC and related details must not be altered or removed.

22. Field 77B: Regulatory Reporting

It is highly recommended to take great care when using the character string 'CrLf', since these characters are used by the network to indicate an end of field or subfield.

The characters in the table below are not part of the z-character set on the SWIFT FIN network. Therefore, SWIFT recommends the use of the hexadecimal EBCDIC code for each character, preceded by two question marks (??) as an escape sequence. Use of this coding method must be bilaterally agreed.

MT 110 Field Specifications

1. Field 20: Sender's Reference

FORMAT

16x

PRESENCE

Mandatory

DEFINITION

This field specifies the reference assigned by the Sender to unambiguously identify the message.

NETWORK VALIDATED RULES

This field must not start or end with a slash '/' and must not contain two consecutive slashes '//'
(Error code(s): T26).

2. Field 53a: Sender's Correspondent

FORMAT

Option A	[/1!a]/[34x] 4!a2!a2!c[3!c]	(Party Identifier) (Identifier Code)
Option B	[/1!a]/[34x] [35x]	(Party Identifier) (Location)
Option D	[/1!a]/[34x] 4*35x	(Party Identifier) (Name and Address)

PRESENCE

Optional

DEFINITION

This field specifies the account or branch of the Sender or another bank through which the Sender will reimburse the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

The absence of fields 53a and 54a implies that the single direct account relationship between the Sender and the Receiver, in the currency of the cheques, will be used.

In those cases where there are multiple direct account relationships, in the currency of the transaction, between the Sender and the Receiver, and one of these accounts is to be used for reimbursement, the account to be credited or debited must be indicated in field 53a, using option B with the party identifier only.

If there is no direct account relationship, in the currency of the transaction, between the Sender and the Receiver (or branch of the Receiver when specified in field 54a), then field 53a must be present.

When field 53a is present and contains a branch of the Sender, the need for a cover message is dependent on the currency of the transaction, the relationship between the Sender and the Receiver and the contents of field 54a, if present.

A branch of the Receiver may appear in field 53a if the financial institution providing reimbursement is both the Sender's correspondent and a branch of the Receiver, and the Sender intends to send a cover message to the branch of the Receiver. In this case, the Receiver will be paid by its branch in field 53a.

In all other cases, when field 53a is present, a cover message, that is MT 202/203 or equivalent non-SWIFT, must be sent to the financial institution identified in field 53a.

When field 53B is used to specify a branch city name, it must always be a branch of the Sender.

The use and interpretation of fields 53a and 54a is, in all cases, dictated by the currency of the transaction and the correspondent relationship between the Sender and Receiver relative to that currency.

3. Field 54a: Receiver's Correspondent

FORMAT

Option A	[/1!a]/[34x] 4!a2!a2!c[3!c]	(Party Identifier) (Identifier Code)
Option B	[/1!a]/[34x] [35x]	(Party Identifier) (Location)
Option D	[/1!a]/[34x] 4*35x	(Party Identifier) (Name and Address)

PRESENCE

Optional

DEFINITION

This field specifies the branch of the Receiver or another bank at which the funds will be made available to the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

The absence of fields 53a and 54a implies that the single direct account relationship between the Sender and the Receiver, in the currency of the cheques, will be used.

In those cases where field 54a contains a branch of the Receiver, and is not preceded by field 53a, or field 53a contains an account of the Sender serviced by the Receiver's branch, the Receiver will claim reimbursement from its branch.

If field 54a contains a branch of the Receiver and field 53a contains a branch of the Sender, the Receiver will claim reimbursement from its branch or will be paid by its branch, depending on the currency of the transfer and the relationship between the Sender and the Receiver.

In all other cases where field 54a contains a branch of the Receiver, the Receiver will be paid by its branch in field 54a.

A branch of the Sender must not appear in field 54a.

If the branch of the Sender or other financial institution specified in field 53a is also the account servicer for the Receiver, field 54a must not be present.

Field 54a containing the name of a financial institution other than the Receiver's branch must be preceded by field 53a; the Receiver will be paid by the financial institution in field 54a.

The use and interpretation of fields 53a and 54a is in all cases dictated by the currency of the transaction and the correspondent relationship between the Sender and Receiver relative to that currency.

4. Field 72: Sender to Receiver Information

FORMAT

6*35x (Narrative)

In addition to narrative text, structured text with the following formats may be used:

Lines 2-6	[/continuation of additional information]	(Narrative)
	or	or
	/8c/[additional information]]	(Code)(Narrative)

PRESENCE

Optional

DEFINITION

This field specifies additional information for the Receiver or other party specified.

CODES

Unless bilaterally agreed otherwise between the Sender and the Receiver, one of the following codes must be used in Code, placed between slashes ('/')

ACC	Account with institution	Instructions following are for the account with institution.
INS	Instructing institution	The instructing institution which instructed the Sender to execute the transaction.
INT	Intermediary institution	Instructions following are for the intermediary institution.
REC	Receiver	Instructions following are for the Receiver of the message.

NETWORK VALIDATED RULES

If the first six characters in line 1 contain the character string /REJT/ or /RETN/, then it is mandatory to follow the *Payments Reject/Return Guidelines* described in the *Standards MT Usage Guidelines*(Error code(s): T80).

USAGE RULES

Field 72 must never be used for information for which another field is intended.

Use of field 72, particularly with uncoded instructions, may cause delay, because, in automated systems, the presence of this field will normally require manual intervention.

It is strongly recommended to use the standard codes proposed above. However, where bilateral agreements covering the use of codes in this field are in effect, the code must conform to the structure of this field.

Each item for which a code exists must start with that code and may be completed with additional information.

Each code used must be between slashes and appear at the beginning of a line. It may be followed by additional narrative text.

Narrative text relating to a preceding code, which is continued on the next line(s), must start with a double slash '//', and, if used, must begin on a new line. Narrative text should preferably be the last information in this field.
